

PETRODORADO ENERGY LTD.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE THREE AND NINE MONTHS ENDED SEPTEMBER 30, 2013

The following is management's discussion and analysis ("MD&A") of the operating and financial results of Petrodorado Energy Ltd. ("Petrodorado" or the "Company") for the three and nine months ended September 30, 2013, as compared to the three and nine months ended September 30, 2012, as well as information and expectations concerning the Company's outlook based on currently available information.

The MD&A should be read in conjunction with the unaudited interim condensed consolidated financial statements of the Company for the three and nine month period ended September 30, 2013 and 2012, prepared in accordance with IFRS (as defined below), together with the accompanying notes and the audited consolidated financial statements and related notes and MD&A for the year ended December 31, 2012. Additional information, including the Company's annual information form for the year ended December 31, 2012, is on SEDAR at www.sedar.com or on the Company's website at www.petrodorado.com.

All dollar values are expressed in US dollars, unless otherwise indicated, and are prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standard Board ("IASB").

This MD&A is prepared as of November 29, 2013.

NON-IFRS MEASURES

Funds from operations include all cash from operating activities and are calculated before the change in non-cash working capital. A reconciliation of cash used in operating activities to funds used in operations for the three and nine months ended September 30, 2013 and 2012, are as follows:

Funds from operations (\$)	Q3 2013	Q3 2012	YTD 2013	YTD 2012
Cash used in operating activities	(888,795)	(632,485)	(2,868,784)	(2,818,001)
Change in non-cash working capital	(26,223)	(261)	341,307	246,320
Funds used in operations	(915,018)	(632,746)	(2,527,477)	(2,571,681)

The non-IFRS measure referred to above does not have any standardized meaning prescribed by IFRS and therefore may not be comparable to similar measures used by other companies. Management uses this non-IFRS measurement for its own performance measures and to provide its shareholders and investors with a measurement of the Company's efficiency and of its ability to fund a portion of its future growth expenditures.

BUSINESS PROFILE AND STRATEGY

The Company is primarily engaged in petroleum and natural gas exploration and development activities in Colombia and California, USA. Petrodorado's head office is located in Calgary, Alberta, Canada and the Company's shares are traded on the TSX Venture Exchange under the trading symbol PDQ.

Petrodorado was formed to explore for and develop petroleum assets in South America, with an initial focus on Colombia, Peru and Paraguay. A significant portfolio of assets with four lower-risk blocks (blocks that have an oil discovery) and five more highly prospective blocks were initially acquired. The Company evaluated approximately 55 blocks before selecting these final nine blocks. The Company exited Peru and Paraguay in 2012 in order to provide more investment focus on its core properties in Colombia but, to maintain its geographical diversity, entered California, USA, through a farm-in agreement during the second quarter of 2013.

ORGANIZATIONAL CHANGES

On October 21, 2013, Mr. Krishna Vathyam, President and Chief Executive Officer ("**CEO**"), resigned from the Company and relinquished his position as a Director. On October 25, 2013, Mr. Emir Arzola, Chief Reservoir Manager, Mr. Max Rolla, Vice President of Exploration, and one other employee also resigned from the Company.

Petrodorado is pleased to announce the appointment of Mr. Robert Cross, an original founder of Petrodorado, to the Board of Directors. Mr. Cross has an extensive resource and investment banking background and is currently a Director of a number of energy and mining companies (Bankers Petroleum, BNK Petroleum, B2Gold). Following the above changes, the Board of Directors will consist of Mr. Douglas Urch, Mr. Gregg Vernon and Mr. Robert Cross as Chairman.

The Board of Directors has commenced a thorough review of the Company and its operations. The review may result in the rationalization of some assets and/or acceleration of exploration activity on its key properties. Additionally, other prospects and opportunities are being considered that would enhance Petrodorado's asset portfolio and more effectively utilize existing cash resources.

The Board will focus its efforts on cash preservation, commence an active search for a new President and CEO, and will consider further enhancements to the Board of Directors going forward.

Mr. Gregg Vernon, a Director of the Company, has replaced Mr. Vathyam on an interim basis as President and CEO. Moreover, Mr. Brian Smith joined the Company on September 9, 2013, in the role of Vice President of Operations. Mr. Vernon and Mr. Smith, with the assistance of the remaining employees of Petrodorado, have been tasked with refocusing the Company, redistributing roles and responsibilities, and making a critical review of the Company's current status, assets and liabilities. All aspects of the Company are being examined with the sole purpose of identifying the changes that must be made to maximize shareholder value in a steady and positive direction going forward.

PETROLEUM AND NATURAL GAS PROPERTIES AND OUTLOOK

At present, Petrodorado has beneficial participation in five oil and gas blocks in Colombia and one block in the San Joaquin basin in California. Multiple drilling prospects and leads have been identified in these blocks.

CPO-5 Block

On June 14, 2010, Petrodorado announced the signing of a farm-in agreement with ONGC Videsh Ltd. (“**ONGC**”) for a 30% participating interest in the CPO-5 Block of Colombia. On October 1, 2010, Petrodorado received official ANH approval of the 30% participation interest assignment. This 492,341 acre block (net 147,702 acres) is located in the Los Llanos basin (Meta Department) and was awarded to ONGC in the 2008 Agencia Nacional de Hidrocarburos (“**ANH**”) heavy oil bid round. The CPO-5 Block is flanked to the north and northwest by the recent discoveries of other operators in the blocks of Guatiquia (Yatay-1 with 10,440 barrels per day (“**bbbl/d**”) of 43° API oil and similar performance from the earlier Candelilla discovery), Corcel (Taya discovery with 1,700 bbl/d of 15.5° API oil), and Cabretero (Kitaro discovery with 2,385 bbl/d of 32° API oil).

During 2010, the Company, with its partner, completed the acquisition of 650 km² of 3D seismic and 240 lineal km of 2D seismic. Seismic processing and interpretation has been completed, with ten (10) leads being identified in this eastern half of the block. On the northwestern half of the block, closer to the discoveries mentioned above, thirteen (13) prospects and leads have been identified with the help of existing 2D seismic data interpretations. On August 1, 2012, the environmental license was received for the CPO-5 Block, which approves 15 sites, 3 wells per site, for a total of 45 wells.

The first of two exploration wells (Kamal-1X) was spudded on October 29, 2012, and reached a total measured depth of 10,500 feet in December 2012. The primary target of the Mirador zone encountered a net pay of 20 feet. This zone was tested using a coiled tubing-nitrogen lift system, which yielded a peak rate of 210 barrels of oil a day of 14° API with high water cut. This test was performed to confirm hydrocarbon production and mobility; not to determine maximum production rates. Given the Kamal-1X well location was selected based on 2D seismic interpretation, its relative location within the large Kamal structure is unclear.

The second exploration well (Loto-1X) spudded on January 22, 2013, and was drilled to a total measured depth of 10,500 feet. This well targeted the Mirador, Guadalupe and Une sands. Petrophysical evaluation, supported by the conventional cores and cuttings descriptions, indicated that the target reservoir sands were all oil charged, with the Mirador and Guadalupe formations being of the most interest with a total potential net pay of approximately 80 feet of high quality sands.

A multi-zone testing program of the Loto-1X well was conducted on the Une and Lower and Upper Mirador zones. The testing of the Une zone resulted in extra heavy oil in non-commercial quantities and further testing was abandoned. A co-mingled test of three of the four identified intervals of the Lower and Upper Mirador zones was performed with an electro-submersible pump (“**ESP**”). An oil rate of 1,500 bbl/d of 17° API oil at a water cut of 80% was achieved. This high water cut was found to conflict with the 30% water saturations reported by matching petrophysical reports from two different companies.

In June of 2013, the Company contracted an independent consultant to perform a technical review of the two exploration wells drilled to date in the CPO-5 Block, Loto-1X and Kamal-1X. The conclusions that were

derived by the consultant from this review were considered to be very encouraging, especially with respect to the Loto-1X structure. The consultant's analysis determined that poor cement bond (lack of vertical hydraulic isolation between the casing and the formation rock) was the root cause of the high water cut tests in the Loto-1X well's Mirador zones. It was also concluded as part of this technical review that the Kamal-1X well test also suffered from very poor cement bond.

The current plan for the Loto-1X well is to attempt remediation of the primary cement job then to re-test the Mirador and Guadalupe sands. Concurrently, the plan also includes the acquisition, processing and interpretation of 3D seismic data for the area covering the Loto and Kamal structures. However, since the net pay of the Kamal-1X well is much lower than in the Loto-1X well, it was recommended to abandon the Kamal-1X well at this time (as per regulatory requirements) and re-evaluate future operations within this structure once 3D seismic data has been acquired.

Subsequent to this independent technical review, the consultant, Mr. Brian Smith, accepted a position within the Company as Vice President of Operations.

Phase I of Petrodorado's exploration commitment with the ANH was fulfilled upon drilling the exploration well, Loto-1X. The ANH has informed the operator that Phase II of the exploration contract commenced in April 2013, which has a commitment of 3 exploration wells within a 3 year time frame. However, the operator and the Company have formally requested from the ANH that the Phase II minimum work commitment be modified to 205 km² of 3D seismic and 1 exploration well. As of November 29, 2013, no formal response to this request has been received from the ANH.

Tacacho Block

In January 2010, Petrodorado acquired a 49.5% working interest in the Tacacho Block within the prolific Putumayo area of Colombia, within which two (2) very large leads have already been identified. Tacacho measures approximately 598,008 acres (net 296,014 acres) and is located in the foreland basin of the Putumayo mountain range, in the Eastern Cordillera area of Colombia. Pacific Rubiales Energy Corp. ("PRE"), the operator, has the remaining 50.5% working interest in the block. The 24 month-long exploration program includes the acquisition, processing and interpretation of 521 km of 2D seismic data. The ANH has already issued multiple extensions to the 24 month period due to security concerns in this geographic area. Meanwhile, initial environmental assessments of the area are underway in preparation for the seismic program. The commencement of the seismic acquisition is currently planned for 2014 once the region has been declared secure. As well, the operator has informed Petrodorado that they have decided to reschedule the previously planned stratigraphic well until evaluation of the new seismic data is completed.

Talora Block

Petrodorado initially earned a 55% interest in the Talora Block, located in the Upper Magdalena basin of Colombia. In the fourth quarter of 2010, Petrodorado acquired an additional 20% interest from a third party and acquired PetroSouth Energy Ltd, which also owned a 20% interest, to increase its aggregate working interest to 95%. On October 16, 2011, Petrodorado executed a farmout agreement allocating a 30% working interest to Sintana Energy decreasing Petrodorado's overall working interest to 65%. The terms of the farmout included: 1) a bonus payment of \$5.2 million; 2) the farmee paying 60% of first well costs up to a maximum of \$3.9 million, with costs after the maximum to be paid at 30%; and 3) the farmee paying 45% of the second well costs up to a maximum of \$2.925 million, with costs after the maximum to

be paid at 30%. Petrodorado's interest, via a wholly owned subsidiary, has been approved by the ANH. The Talora Block consists of 58,905 acres (net 38,289 acres) located to the southwest of the city of Bogota, after the first relinquishment.

The Company acquired 122 km of 2D seismic data during the first quarter of 2010. After the analysis of the acquired seismic data, the first exploration well (Verdal-1) was spudded on September 15, 2010, targeting the Tetuan and Caballos formations. Verdal-1 was completed in November 2010, without encountering the Caballos formation. The Tetuan formation was tested and yielded a peak rate of 770 thousand standard cubic feet per day (mscf/d) of gas with indications of associated condensate after further compositional analysis. The Company is currently having laboratory analyses performed in an attempt to determine whether the low recharge rates of the formation were due to drilling-induced damage or simply due to geological and reservoir characteristics. If the former is confirmed by way of these analyses, the Tetuan formation, within the Verdal structure, could possibly be a viable producer with close proximity to market.

The exploratory well Dorados-1X was spudded on July 31, 2012, reached a total measured depth of 7,282 feet, and was tested in the Upper and Lower Dorados sands within the Cretaceous sandstone unit. The main objectives were to reach the Cretaceous Caballos and Tetuan formations, but these formations were not found at this well location. However, an exceptionally thick Cretaceous-Cenomanian sand of 1,850 ft gross was found that had not been previously identified or reported in this basin.

Despite encountering what appeared to be a thick and well-defined gas and oil column, with a possible basal water contact while drilling, the well testing results provided little information due to seemingly significant formation damage. The post-drill well testing program proved the sand section to be a low pressure reservoir system with significant formation damage and evidence that the oil has been emulsified. Petrodorado is currently performing geochemical analyses in an effort to evaluate reservoir potential.

After an in-depth evaluation of the results from the Dorados-1X well, future plans could include a new undamaged borehole (either by way of sidetrack hole or twin well) designed to overcome the sensitivity of this reservoir to formation damage due to low-pressure conditions found to be common in this part of the basin, in order to further evaluate the Dorados structure, a large thrust anticline with 4-way closure with a potential thick reservoir section. Petrodorado also takes into consideration that Dorados sands present better pressure regime than the nearby Guando Oil Field (126 MMBO recoverable) located 40 km to the southeast of the Dorados-1X well. Plans are also underway to gather relevant data to evaluate the non-conventional target in the fractured oil shale of the Cretaceous La Luna oil source rock at the earliest possible opportunity.

When the ANH originally approved the extension of the Talora license, it came with a commitment of one exploration well to be drilled by the end of July 2013. This commitment was fulfilled with the drilling of the Dorados-1X well. The commitment of one well within the evaluation area of the Verdal structure, which is to reach a True Vertical Depth (TVD) of 5,000 feet, was to be drilled on or before November 29, 2013. On November 17, 2013, the Company spudded the Verdal-2X well and successfully reached a TVD of 5,000 feet on November 28, 2013, thus fulfilling the ANH commitment in order to maintain the exploration license in the Talora Block. Petrodorado plans to request permission to drill the Verdal-2X well deeper, to an approximate depth of 6,100 feet TVD, and then assess the Company's options.

La Maye Block

Petrodorado has an undivided 20% working interest in an exploration and production contract with the ANH in the La Maye Block and an undivided 20% interest in four turn-key test wells and associated tie-in equipment. The La Maye Block is located in the Lower Magdalena Valley of Colombia and consists of approximately 73,956 acres (net 14,791 acres).

The Company has identified three additional drilling prospects in the La Maye Block with a probability of success set at 25%. Petrodorado Ltd. (the private subsidiary of Petrodorado), in conjunction with the operator, drilled the Noelia-1 well as the first exploration oil well on the La Maye Block in October 2009. This first exploration well is expected to be tested and a second exploration well is also expected to be drilled and tested as part of Phase II of the exploration program in this block as soon as the flood waters recede in this geographic area of Colombia. The Company has identified La Maye as non-core and is pursuing a sale process.

In 2009, Petrodorado Ltd. paid \$3.5 million into an escrow account to satisfy its net commitment to the participation agreement. Petrodorado authorizes draws from this account as certain development milestones are met. As at September 30, 2013, \$1,884,438 had been withdrawn leaving \$1,615,562 in the escrow account

Buganviles Block

Petrodorado has a varying working interest (30% to 59.5%) in the Buganviles Block located in the Upper Magdalena basin of Colombia obtained through three separate transactions. The Buganviles Block consists of approximately 73,794 acres (net 43,907 acres).

In February 2010, Petrodorado obtained a 20% undivided working interest in the Buganviles Block through the purchase of all of the issued and outstanding shares of Holywell Resources S.A. (“**Holywell**”) from a private vendor for the aggregate cash purchase price of approximately \$6.3 million. Holywell was a private (Panama incorporated) oil & gas company with operations in Colombia. The name Holywell was changed to Petrodorado South America S.A. during the first quarter of 2010. Prior thereto, in November 2009, Petrodorado entered in to a farm-in agreement with PRE to acquire an additional 29.5% working interest in the Visure prospect and 25% working interest in the Tuqueque prospect. In addition, in September 2010, Petrodorado acquired an additional 10% working interest in the block through a farm-in agreement with Loon Energy Corp. The farm-in terms were satisfied with Petrodorado having paid 100% (20% net) of the drilling costs for two exploration wells, Visure-1X and Tuqueque-1X.

Overall Petrodorado’s position in the block is as follows:

Visure Prospect	59.5%
Tuqueque Prospect	55%
Rest of the block	30%

The first of these exploration wells, the Visure-1X well, located in the Visure prospect to the southeastern border of the Buganviles Block, was drilled in the fourth quarter of 2010 to evaluate a structural trap similar to the nearby producing Abanico field to the northeast. The well was tested in the Lower Guadalupe Formation at a stabilized average production rate of 46 bbl/d of 15.6° API with 14 barrels of water per day. The Visure-1X well was suspended with different production techniques being evaluated

based on the production test analysis in order to economically produce the oil encountered in the Lower Guadalupe Formation. A cyclic steam injection pilot is being planned for this well.

The second exploration well, the Tuqueque-1X well, was spudded on November 4, 2010, with the Caballos formation at 11,300 feet as the primary target. The well was suspended after two side tracks to reach the Caballos formation at a depth of 9,303 feet. Two secondary target formations were identified as the Monsarrate formation and the Olini formation. Three intervals in the Olini formation were tested and did not produce significant hydrocarbons. The Monserrate formation is planned to be tested at a later date via a new drill up dip from the Tuqueque-1X well location.

The operator has applied for a two year extension of the contract with a suggested work program given the current exploration license expired on June 30, 2012. As of November 29, 2013, an official response from the Colombian Government regarding the requested license extension has yet to be received. The Company recognized impairments as of December 31, 2012, in relation to exploration and evaluation costs incurred within this exploration area. If the license extension is eventually received from the Colombian government, recovery of previously recorded impairments of these exploration and evaluation costs will be analyzed by management.

Moriche Block

Petrodorado acquired an undivided 49.5% working interest in the Mauritia Este Prospect in the Moriche Block. This prospect consists of approximately 3,898 acres (net 1,930 acres) and is located in the Los Llanos basin of Colombia. During 2010, Petrodorado and the operator, PRE, successfully completed a discovery well, ME-1, as a Mirador producer on the Moriche Block.

The ME-1 well tested at a peak rate of 693 bbl/d of 14° API oil and was put on production on June 18, 2010, at a gross rate of approximately 400 bbl/d (approximately 198 bbl/d net to Petrodorado). Production from ME-1 was shut down on December 4, 2011 due to a failure in the downhole pump. A remedial program was performed in March 2012 resulting in a return to production at a gross rate of approximately 131 bbl/d on April 17, 2012. Production was reduced as of May 2, 2012, due to issues with the surface equipment. Ultimately, this well was shut-in during the third quarter of 2012.

On March 20, 2013, Petrodorado executed a conditional sale agreement with the operating partner of the Moriche Block in which the Company will relinquish its 49.5% working interest held in the Mauritia Este Prospect within the Moriche Block for total consideration of \$3.5 million. Under the agreement, the \$3.5 million cash consideration will be paid to the Company by way of pre-determined quarterly installment payments over the 2013 and 2014 calendar years, during which the purchaser of the block has the option to return the rights of the Moriche Block under specific circumstances, including government approval, to the operating partner (and to the Company) for a 90% return of considerations paid to date. Final assignment of ownership of the rights to the Moriche Block will not be completed until all conditions of the sale agreement are fulfilled. To date, Petrodorado has received \$2.2 million in installment payments with regards to this agreement that are included in accounts payable and accrued liabilities. Currently, an installment payment of \$600,000 is overdue from the buyer as of November 29, 2013.

California Block

On May 9, 2013, the Company entered into an agreement with Solimar Energy Ltd. (“**Solimar**”) regarding a heavy oil opportunity (gross: 1,720 acres) in the San Jaoquin basin of California for a non-operated

working interest of 15% wherein the Company will pay 100% of Phase I up to a maximum of \$2.5 million, with costs in excess of the maximum to be paid at 15%, towards the appraisal and development of the Kreyenhagen Field. This includes drilling, coring, testing and hydraulic fracturing of up to 4 wells as well as creating reservoir models and thermal simulations. Within 30 days of the completion of this initial phase, the Company has the option to enter Phase II and increase its working interest to 40% (non-operated) by committing an additional \$4 million maximum, with costs in excess of the maximum to be paid at 40%, towards a thermal steam pilot.

The Company will also earn a 12% non-operated working interest in the Kreyenhagen Shale Oil acreage (gross: 8,265 acres) if it elects to enter the second phase. If the Company elects not to enter into Phase II, the Company will retain its original 15% working interest. This 1,720-acre project area has government approval over 225 acres where work will be conducted. The Company estimates a gross resource potential of approximately 47 mmbbl of 14°-17° API oil in the pilot area alone.

On July 20, 2013, the first well (K 2-33) of the Phase I program reached a total measured depth of 1,472 feet and was subsequently logged and cased. The well was directionally drilled up to a 48 degree angle and encountered close to 600 feet (measured depth) gross interval of the Temblor heavy oil formation.

On September 21, 2013, the second well (K 8-33) of the Phase I program was successfully drilled and reached a total measured depth of 1,590 feet and was subsequently logged and cased. The well was directionally drilled up to a 48 degree angle and preliminary analysis indicates that approximately 900 feet gross measured depth of the Temblor heavy oil formation was encountered.

Forward plans are to move in a completion rig in due course to perforate and production test the K 2-33 and K 8-33 wells in order to obtain fluid samples for use in detailed log analysis and reservoir modeling.

The Company has contracted an independent heavy oil consultant to make a technical and economic review of this opportunity. The consultant's final report will factor into the Management's decision as to whether to continue into the next phase of the proposed work program.

COMMITMENT SUMMARY

A summary of the Company's estimated capital commitments (in millions of dollar) are as follows:

Block/Country	Interest	2013	2014	2015	2016	Total
Talora, Colombia ⁽¹⁾	65.0%	4.6	-	-	-	4.6
Tacacho, Colombia ⁽²⁾	49.5%	-	18.2	-	-	18.2
CPO-5, Colombia ⁽³⁾	30.0%	-	-	-	3.6	3.6
La Maye, Colombia ⁽⁴⁾	20.0%	-	1.8	-	-	1.8
San Jaoquin, California ⁽⁵⁾	15.0%	0.7	-	-	-	0.7
Total		5.3	20.0	-	3.6	28.9

1) Net commitment represents 1 well required by the end of November 2013.

2) Petrodorado's commitment to acquire and process 512 km² of 2D seismic data (to pay 100% of costs up to a maximum of \$8 million, 49.5% of costs thereafter).

- 3) Includes Petrodorado's 30% share of the ANH commitment of 3 exploration wells for the second phase of the exploration program by 2016.
- 4) Net commitment represents completion of Phase I (testing of Noelia-1 well) and execution of Phase II (drilling & testing of additional well). These expenditures are funded through the designated escrow account in restricted cash.
- 5) Petrodorado commitment towards Phase I of the exploration program.

The expenditures provided in the above table represent the Company's estimated cost to satisfy contract requirements. Actual expenditures to satisfy these commitments, initiate production or create reserves may differ from these estimates.

DISCUSSION OF OPERATING RESULTS

Revenue

During the three and nine months ended September 30, 2013, the Company generated no oil and gas revenues (nil and \$111,429 for the three and nine months ended September 30, 2012, respectively). To date, all oil and gas revenue realized by the Company has been on account of oil and gas production from the ME-1 well of the Moriche Block. Oil and gas production was suspended during the three months ended March 31, 2012, due to required work-over maintenance, with production resuming in the second quarter of 2012. However, this well was shut-in during the third quarter of 2012 and remains shut-in. Overall 2012 revenue was the result of the sale of 1,020 barrels of oil at an average sales price of \$109 per barrel of oil.

In addition, interest and other revenue on cash balances and short-term investments of \$124,003 and \$390,571 was realized for the three and nine months ended September 30, 2013, respectively (\$140,006 and \$454,141 for the three and nine months ended September 30, 2012). Decreases in interest and other revenue is primarily due to the gradual reduction of the average short-term investment principal upon which interest revenue is generated as these invested funds are withdrawn and used in operating activities as well as exploration and evaluation capital expenditures.

Revenue (\$)	Q3 2013	Q3 2012	YTD 2013	YTD 2012
Oil and gas sales, net of royalties	-	-	-	111,429
Interest and other	124,003	140,006	390,571	454,141
Total Revenue	124,003	140,006	390,571	565,570

No production was realized from the ME-1 well, for the three and nine months ended September 30, 2013 (0 bbls and 1,020 bbls, net to Petrodorado, for the three and nine months ended September 30, 2012, respectively). Production from the ME-1 well is shipped via truck and pipeline to oil storage facilities located on the northwest coast of Colombia pending sales, which occur on an infrequent basis. As of December 4, 2011, production on the ME-1 well was suspended due to required work-over maintenance necessary in order to sustain production that would be economically feasible. As of April 17, 2012, the necessary maintenance had been completed and production of 131 bbl/d was being realized before being reduced in May 2012 due to issues with the surface equipment. Ultimately, this well was shut-in during the third quarter of 2012 and remains shut-in.

Operating Costs

During the three and nine months ended September 30, 2013, the Company incurred nil in operating costs while for the three and nine months ended September 30, 2012, the Company incurred (\$190,105) and \$431,112, including transportation, in operating costs, respectively. Given the ME-1 well was shut-in during the third quarter of 2012, no operating costs have been incurred in 2013. While minimal production was realized in the first nine months of 2012, operating costs included work-over maintenance performed on the ME-1 well that were incurred in the first quarter of 2012 during which production had been suspended.

General and Administrative Expenses

General and administrative expenses (“G&A”) for the three and nine months ended September 30, 2013, were \$734,358 and \$2,193,285, respectively (\$615,827 and \$1,737,267 for the three and nine months ended September 30, 2012, respectively). The increase in G&A for the three and nine months ended September 30, 2013, when compared to the same periods to September 30, 2012, is primarily due to an increase wages and salaries incurred in current operations as well as the addition of professional fees and administrative expenses incurred in the first half of 2013 on account of the commencement of operations in California. Increases in wages and salaries are on account of the reduction of cost recoveries realized as operator of the exploratory activities of the Dorados-1X well in the Talora Block when comparing YTD 2013 to YTD 2012 as well as new salaries for a new member of management hired in Q3 2013. Petrodorado budgets \$4.0 million for G&A expenses for the 2013 year (\$4 million for the 2012 year). G&A was \$2.8 million for the year ended December 31, 2012, an improvement over budget of \$1.2 million.

General and Administrative Expenses (\$)	Q3 2013	Q3 2012	YTD 2013	YTD 2012
Professional Fees	155,449	228,943	555,844	428,444
Wages & Salaries	414,569	203,637	1,014,421	790,982
Fees, Rent, Investor Relations and Other	164,340	183,247	623,020	517,841
Total	734,358	615,827	2,193,285	1,737,267

Finance Costs

During the three and nine months ended September 30, 2013, the Company incurred \$26,774 and \$90,927, respectively, in finance costs due to the recording of accretion expense on provisions related to decommissioning obligations and equity tax payable (\$39,443 and \$127,951 for the three and nine months ended September 30, 2012, respectively). The overall decrease in finance costs is due to the effect of less accretion being generated on outstanding equity tax payable balances as the principal of this balance is reduced by way of statutory payments realized periodically each year.

Finance Costs (\$)	Q3 2013	Q3 2012	YTD 2013	YTD 2012
Accretion of decommissioning obligations	6,229	5,135	18,271	14,185
Accretion of equity tax payable	20,545	34,308	72,656	113,766
Total	26,774	39,443	90,927	127,951

Foreign Exchange Loss (Gain)

The Company generated foreign exchange losses of \$1,852,758 and \$3,019,471 for the three months ended September 30, 2013 and 2012, respectively. For the nine months ended September 30, 2013 and 2012, the Company generated a foreign exchange gain of \$2,947,441 and a foreign exchange loss of \$3,009,574, respectively. The three month losses in each year and to date in the 2012 year are due to decreasing strength of the US dollar against the Canadian dollar and Colombian peso. The gain realized to date in the 2013 year is due to the inverse effect of an increase in the strength of the US dollar continually throughout the 2013 year when compared to the Canadian dollar and Colombian Peso.

Stock-Based Compensation

For the three and nine months ended September 30, 2013, the Company recorded a stock-based compensation of \$109,348 and \$355,101 (\$586,494 and \$1,283,284 for the comparative periods to September 30, 2012), of which nil was capitalized in exploration and evaluation assets (\$228,273 and \$350,285 for the comparative periods to September 30, 2012).

The stock-based compensation arose due to a total of 10,980,000 and 30,000,000 options being granted during the year ended December 31, 2011 and 2010, respectively, 5,685,000 options being granted during the year ended December 31, 2012, and 4,000,000 options being granted during the nine months ended September 30, 2013. The decrease in stock-based compensation expense is primarily due to the fact that the majority of outstanding options were fully vested prior to the beginning of the 2013 year, resulting in a reduced quarterly stock-based compensation expense on account of the reduced amount of options still vesting.

Stock-Based Compensation (\$)	Q3 2013	Q3 2012	YTD 2013	YTD 2012
Expensed	109,348	358,221	355,101	932,999
Capitalized	-	228,273	-	350,285
Total (to Contributed Surplus)	109,348	586,494	355,101	1,283,284

Depletion and Depreciation

For the three and nine months ended September 30, 2013, the Company recorded depletion and depreciation expense of \$22,125 and \$70,230, respectively (\$8,916 and \$163,825 for the comparative periods to September 30, 2012). Expenses recorded in each of these time periods consist of depreciation of general fixed assets held by the Company, which expense continues to decrease as the underlying fixed assets become fully depreciated with no new additions to date in the 2013 year. Additionally, depletion of oil and gas properties of \$17,035 was recorded based on oil production, net to Petrodorado, of 1,020 barrels of oil in the second quarter of 2012. No depletion has been recorded in 2013 given no oil and gas production has been realized in the 2013 year.

Net Income (Loss) and Comprehensive Loss

For the three and nine months ended September 30, 2013, the Company generated a net loss of \$2,571,360 and net income of \$678,469, respectively (net income of \$1,040,883 and a net loss of \$1,084,508 for the comparative periods to September 30, 2012), and comprehensive losses of \$184,691

and \$3,138,701, respectively (comprehensive income of \$5,177,759 and \$2,801,978 for the same periods to September 30, 2012).

The results for the three months ended September 30, 2013 and 2012, arose primarily due to the similar effects of foreign exchange losses in these comparative quarters, as discussed previously, with offsetting effects in the three months ended September 30, 2012, due to the gain on divestiture of Peru assets. Similar movements in other comprehensive income were realized in these comparative periods due to comparable movements in currency strength with regards to the Canadian dollar and Colombian peso when compared to the US dollar.

Results for the nine months ended September 30, 2013, and 2012 were also affected by contrasting foreign exchange movements. While the strength of the US dollar when compared to the Canadian dollar and Colombian Peso strengthened significantly for the nine months ended September 30, 2012, significant decreases in strength of the US dollar over its before-mentioned counterparts were realized during the nine months ended September 30, 2013, thus resulting in significant foreign exchange gains in 2013 to date. Moreover, substantial operating costs and stock-based compensation expense incurred in the first nine months of 2012 when compared to the same period in 2013 also contributed to the overall net loss for this period. However, the overall net loss realized in the nine months ended September 30, 2012, were minimized by the realized gains on the divestiture of Peru assets.

The inverse effect for the noted foreign exchange movements was realized with regards to comprehensive losses in each nine month period: the Canadian dollar realized notable strengthening in the 2012 period while it significantly weakened for the comparative 2013 period thus resulting in considerable other comprehensive losses in 2013 and noticeable other comprehensive income for the comparative 2012 period.

Funds used in Operations

For the three and nine months ended September 30, 2013, the Company used funds in operations of \$865,018 and \$2,477,477, respectively (funds used in operations of \$632,746 and \$2,571,681 for the comparative periods to September 30, 2012). For the comparative three month periods, an increase in funds used in the 2013 period is exclusively due to operating costs credits realized in the 2012 period by way of the operator of the ME-1 well. For the comparative nine month periods, the decrease in funds used in operations relates primarily to the decrease in operating expenses incurred during the nine months ended September 30, 2013.

Employee Resignations

On October 21, 2013, Mr. Krishna Vathyam, President and Chief Executive Officer, resigned from the Company and relinquished his position as a Director. On October 25, 2013, Mr. Emir Arzola, Chief Reservoir Manager, Mr. Max Rolla, Vice President of Exploration, and one other employee also resigned from the Company. Estimated one-time severance payments to these individuals which will be recognized in the fourth quarter of 2013 are approximately \$1.0 million.

These individuals held 17,750,000 options to acquire common shares of which 5,250,000 expired in November 2013 with the remaining 12,500,000 to expire in January 2014. The January 2014 options are exercisable at a weighted average strike price of CDN \$0.41 prior to their expiration.

Arbitration Proceedings

On October 4, 2013, Sintana Energy Inc. ("Sintana") announced the commencement of an arbitration action through the International Chamber of Commerce against Petrodorado as the Operator of the Talora Block located in the Magdalena Basin of Colombia. Sintana and Petrodorado entered into a Farmout Agreement dated October 16, 2011 ("Agreement") to further the exploration and development of the Talora Block. Sintana contends that Petrodorado committed multiple breaches of the Agreement.

The Company intends to vigorously defend itself with respect to this arbitration action and Management believes it is probable that they will be successful in their defense. Management views this action to be without merit and, as such, can not reliably measure the exposure to the Company at this time. However, Management believes that any amount incurred on account of this action will be negligible. In the event the Company is successful in defending this arbitration action, the commitment as outlined in Note 12 for Talora for 2013 would be reduced by approximately \$2.0 million, reflecting Sintana's interest under the terms of the Agreement.

CAPITAL EXPENDITURES

For the nine months ended September 30, 2013 and 2012, the Company had increases of \$8.9 million and \$11.1 million, respectively, in exploration and evaluation capital expenditures.

For the expenditures in the nine months ended September 30, 2013, the Company spent \$5.9 million in CPO-5 in the drilling program of the Loto-1X well. The Company also performed environmental and security work in preparation of the planned seismic program for \$0.4 million in Tacacho, continued geophysical analysis for \$0.3 million in Talora, remediation work for \$0.2 million in La Maye, and the commencement of the Phase I drilling program for \$1.2 million as well as the initial farm-in payment of \$0.5 million in California.

Additionally, for the nine month period ended September 30, 2013, the Company capitalized \$406,717 of general and administrative expenses (September 30, 2012 - \$200,067) and nil of stock-based compensation (September 30, 2012 - \$350,285) to exploration and evaluation assets. The Company does not hold any tangible exploration assets.

For capital expenditures in property, plant and equipment, the Company spent nil and \$71,000 for the nine months ended September 30, 2013 and 2012, respectively.

LIQUIDITY AND CAPITAL RESOURCES

The Company is pursuing its strategy of focusing on its high impact Colombian exploration blocks as well as identifying the production potential on the California asset in 2013. This will include the execution of the outlined exploration drilling and testing programs in the CPO-5, Talora and La Maye Blocks, the acquisition of over 1,000 km of 2D seismic in the Tacacho Block, and the realization of the data gathering phase in the San Joaquin basin of California through a fully funded budget of approximately \$5.3 million for the remainder of the 2013 year. Included within this plan are amounts required to meet contractual commitments as outlined in the "Commitment Summary" section.

On December 21, 2010, a \$3.0 million letter of credit was issued through a Colombian bank to the ANH in respect to the Phase I drilling obligations on the CPO-5 Block. This letter of credit is secured by a \$3,121,535 term deposit made at the Colombian bank. Additionally, on July 8, 2013, a \$1,850,000 letter of credit was issued through a Colombian bank to the ANH in respect to Phase II drilling obligations on the CPO-5 Block. This letter of credit is secured by a \$1,850,000 term deposit made at the Colombian bank.

A further \$403,920 letter of credit was issued through a Colombian bank on December 20, 2010 to the ANH to guarantee the Company's capital expenditure obligations with its partner, PRE, in the Tacacho Block. This letter of credit is secured by a \$425,610 term deposit made at the Colombian bank.

The Company's oil and gas interests are in the early production stage and the Company has only determined whether its petroleum and natural gas properties contain reserves that are economically recoverable on one of its blocks to date, namely Moriche, which has since been sold. Accordingly, the recoverability of amounts recorded as petroleum and natural gas properties is dependent upon the existence and discovery of economically recoverable oil and gas reserves on the remaining blocks, the political stability of Colombia, and the ability of the Company to secure adequate sources of financing to fund the development of its assets and put them into production and then achieve future profitable production. The outcome of these matters cannot be predicted with certainty at this time.

The Company's approach to managing liquidity is to ensure a balance between capital expenditure requirements and cash provided by operations, available credit facilities and working capital. As at September 30, 2013, the Company had working capital of \$24.0 million (down from \$38.0 million at December 31, 2012) comprised primarily of short term investments. The decrease in working capital is primarily due to funds used in operating activities as well as exploration and evaluation capital expenditures. As at September 30, 2013, the Company also had \$7.3 million of non-current restricted cash. As such, the current budget forecast of \$5.3 million in exploration and development expenditures on Petrodorado's oil and gas properties and \$1.8 million in general corporate expenses through the end of 2013 is fully funded by the Company's total capital resources of \$31.3 million.

FINANCIAL INSTRUMENTS AND OTHER INSTRUMENTS

The carrying values of the Company's financial instruments, consisting of cash and cash equivalents, short-term investments, accounts receivable, restricted cash, and accounts payable and accrued liabilities, approximate their fair values due to the short-term maturity of such instruments. The fair value of non-current restricted cash approximates its carrying value because interest rates are variable and reflective of market rates. The equity tax payable balance was recorded at discounted value, due to its long term maturity, which represents its fair value at such date. Unless otherwise noted, it is management's opinion that the Company is not exposed to significant interest, currency or credit risks arising from these financial instruments.

SHAREHOLDERS' EQUITY

Common shares

At September 30, 2013, the Company was authorized to issue an unlimited number of common shares, with no par value, with holders of common shares entitled to one vote per share and to dividends, if

declared. Outstanding common shares as of September 30, 2013, were 482,547,066 (December 31, 2012 - 482,547,066).

Stock options

The Company has adopted a rolling stock option plan whereby options can be granted from time to time to directors, officers, employees and consultants at the discretion of the Board of Directors. The number of options that can be granted is limited to 10% of the total shares issued and outstanding. A summary of the changes in stock options is presented below:

	Number of options	Weighted average exercise price (CDN\$)
Balance, January 1, 2012	37,980,000	\$ 0.45
Options issued	5,685,000	0.20
Expired options	(666,667)	0.73
Forfeitures	(1,333,333)	0.55
Stock options amended (old price)	(13,980,000)	0.49
Stock options amended (new price)	13,980,000	0.25
Balance, December 31, 2012	41,665,000	\$ 0.33
Options issued	4,000,000	\$ 0.10
Expired options	(750,000)	\$ 0.25
Balance, September 30, 2013	44,915,000	\$ 0.31
Exercisable, September 30, 2013	35,436,667	\$ 0.35

On September 9, 2013, the Company granted 4,000,000 options to acquire common shares to a new employee, at a price of CDN \$0.10 per common share. The options are for a five year term, expiring on September 9, 2018, and vest one-third on the first anniversary date, one-third on the second anniversary date and one-third on the third anniversary date from the date of grant. Of the options previously granted to exiting officers and employees, 750,000 expired on August 4, 2013, and 5,250,000 expired in November 2013.

	Common Shares	Stock Options
As at November 29, 2013	482,547,066	39,665,000

ADOPTION OF NEW AND REVISED ACCOUNTING STANDARDS

On January 1, 2013, the Company adopted new standards with respect to IFRS 10 "Consolidated Financial Statements", IFRS 11 "Joint Arrangements", IFRS 12 "Disclosure of Interests in Other Entities", IFRS 13 "Fair Value Measurement", and complied with amended disclosure requirements as found in IFRS 7 "Financial Instrument: Disclosures". The adoption of these standards had no impact on the amounts recorded for the periods presented in the associated interim condensed consolidated financial statements for the period ended September 30, 2013.

IFRS 9 “Financial Instruments” (“**IFRS 9**”) will replace IAS 39 “Financial Instruments: Recognition and Measurement” (“**IAS 39**”). IFRS 9 uses a single approach to determine whether a financial asset is measured at amortized cost or fair value, replacing the multiple rules in IAS 39. The approach in IFRS 9 is based on how an entity manages its financial instruments in the context of its business model and the contractual cash flow characteristics of the financial assets. The new standard also requires a single impairment method to be used, replacing the multiple impairment methods in IAS 39. IFRS 9 is effective for annual periods beginning on or after January 1, 2015. The Company is currently evaluating the impact of IFRS 9 on its consolidated financial statements.

USE OF ESTIMATES AND JUDGMENTS

The timely preparation of the financial statements requires management to make judgments, estimates and assumptions that affect the application of accounting policies and reported amounts of assets and liabilities and income and expenses. Accordingly, actual results may differ from these estimates. Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the period in which the estimates are revised and in any future periods affected. Significant estimates and judgments made by management in the preparation of these financial statements are outlined below.

Critical judgments in applying accounting policies

The following are the critical judgments that management has made in the process of applying the Company’s accounting policies and that have the most significant effect on the amounts recognized in these consolidated financial statements:

i) Identification of cash-generating units

The Company’s assets are aggregated into cash-generating units, for the purpose of calculating impairment, based on their ability to generate largely independent cash flows. By their nature, these estimates and assumptions are subject to measurement uncertainty and may impact the carrying value of the Company’s assets in future periods.

ii) Impairment of petroleum and natural gas assets

Judgments are required to assess when impairment indicators, or reversal indicators, exist and impairment testing is required. In determining the recoverable amount of assets in the absence of quoted market prices, impairment tests are based on estimates of reserves, production rates, future oil and natural gas prices, future costs, discount rates, market value of land and other relevant assumptions.

iii) Exploration and evaluation assets

The application of the Company’s accounting policy for exploration and evaluation assets requires management to make certain judgments as to future events and circumstances as to whether economic quantities of reserves have been found in assessing economic and technical feasibility.

iv) Income taxes

Judgments are made by management to determine the likelihood of whether deferred income tax assets at the end of the reporting period will be realized from future taxable earnings. To the extent that assumptions regarding future profitability change, there can be an increase or decrease in the

amounts recognized in respect of deferred tax assets as well as the amounts recognized in profit or loss in the period in which the change occurs.

Key sources of estimation uncertainty

The following are the key assumptions concerning the sources of estimation uncertainty at the end of the reporting period that have a significant risk of causing adjustments to the carrying amounts of assets and liabilities.

i) Reserves

The assessment of reported recoverable quantities of proved and probable reserves include estimates regarding production profile, commodity prices, exchange rates, remediation costs, timing and amount of future development costs, and production, transportation and marketing costs for future cash flows. It also requires interpretation of geological and geophysical models in anticipated recoveries. The economical, geological and technical factors used to estimate reserves may change from period to period. Changes in reported reserves can impact the carrying values of the Company's petroleum and natural gas properties and equipment, the calculation of depletion and depreciation, the provision for decommissioning obligations, and the recognition of deferred tax assets due to changes in expected future cash flows.

The Company's petroleum and natural gas reserves represent the estimated quantities of petroleum, natural gas and natural gas liquids which geological, geophysical and engineering data demonstrate with a specified degree of certainty to be economically recoverable in future years from known reservoirs and which are considered commercially producible. Such reserves may be considered commercially producible if management has the intention of developing and producing them and such intention is based upon (i) a reasonable assessment of the future economics of such production; (ii) a reasonable expectation that there is a market for all or substantially all the expected petroleum and natural gas production; and (iii) evidence that the necessary production, transmission and transportation facilities are available or can be made available. Reserves may only be considered proven and probable if the ability to produce is supported by either actual production or conclusive formation tests. The Company's petroleum and gas reserves are determined pursuant to National Instrument 51-101, Standard of Disclosures for Oil and Gas Activities.

ii) Decommissioning obligations

The Company estimates future remediation costs of production facilities, wells and pipelines at different stages of development and construction of assets or facilities. In most instances, removal of assets occurs many years into the future. This requires assumptions regarding abandonment date, future environmental and regulatory legislation, the extent of reclamation activities, the engineering methodology for estimating cost, future removal technologies in determining the removal cost and liability-specific discount rates to determine the present value of these cash flows.

iii) Business combinations

In a business combination, management makes estimates of the fair value of assets acquired and liabilities assumed which includes assessing the value of oil and gas properties based upon the estimation of recoverable quantities of proven and probable reserves being acquired.

iv) Share-based payments

All equity-settled, share-based awards issued by the Company are recorded at fair value using the Black-Scholes option-pricing model. In assessing the fair value of equity-based compensation, estimates have to be made regarding the expected volatility in share price, option life, dividend yield, risk-free rate and estimated forfeitures at the initial grant date.

v) Tax provisions

Tax provisions are based on enacted or substantively enacted laws. Changes in those laws could affect amounts recognized in profit or loss both in the period of change, which would include any impact on cumulative provisions and in future periods. Deferred tax assets (if any) are recognized only to the extent it is considered probable that those assets will be recoverable. This involves an assessment of when those deferred tax assets are likely to reverse.

PRINCIPAL BUSINESS RISKS

The Company's business and results of operations are subject to a number of risks and uncertainties which are outlined under the heading "Risk Factors" in the Annual Information Form for the year ended December 31, 2012, and also including, but not limited to, the following:

Crude Oil and Natural Gas Development

Exploration, development and production of oil and natural gas involves a wide variety of risks which include, but are not limited to, the uncertainty of finding oil and gas in commercial quantities, securing markets, commodity price fluctuations, exchange and interest rate exposure and changes to government regulations, including regulations relating to prices, taxes, royalties and environmental protection. The oil and gas industry is intensely competitive and the Company competes with a large number of companies with greater resources.

The Company's ability to obtain reserves in the future will depend not only on its ability to develop its current properties but also on its ability to acquire new prospects and producing properties. The acquisition, exploration and development of new properties also require that sufficient capital from outside sources will be available to the Company in a timely manner. The availability of equity or debt financing is affected by many factors many of which are beyond the control of the Company.

Foreign Operations

There are a number of risks associated with conducting foreign operations over which the Company has no control, including political instability, potential and actual civil disturbances, ability to repatriate funds, changes in laws affecting foreign ownership and existing contracts, environmental regulations, oil and gas prices, production regulations, royalty rates, income tax law changes, potential expropriation of property without fair compensation and restriction on exports.

Addition of Reserves and Resources

The Company's future crude oil and natural gas reserves and production, and cash flows to be derived therefrom, are highly dependent on the Company successfully discovering and developing or acquiring new reserves and resources. The addition of new reserves and resources will depend not only on the

Company's ability to explore and develop properties but also, in the case of reserves, on its ability to select and acquire suitable producing properties or prospects. There can be no assurance that the Company's exploration, development or acquisition efforts will result in the discovery and development of commercial accumulations of oil and natural gas.

Reserve Estimates

There are numerous uncertainties inherent in estimating quantities of reserves, including many factors beyond the control of the Company. Estimates of reserves depend in large part upon the reliability of available geological and engineering data and require certain assumptions to be made in order to assign reserve volumes. Geological and engineering data is used to determine the probability that a reservoir of oil and/or natural gas exists at a particular location, and whether, and to what extent, such hydrocarbons are recoverable from the reservoir. Accordingly, the ultimate reserves discovered by the Company may be significantly less than the total estimates.

Exploration Risks

The exploration of the Company's properties may from time to time involve a high degree of risk that no production will be obtained or that the production obtained will be insufficient to recover drilling and completion costs. The costs of seismic operations and drilling, completing and operating wells are uncertain to a degree. Cost overruns can adversely affect the economics of the Company's exploration programs and projects. In addition, the Company's seismic operations and drilling plans may be curtailed, delayed or cancelled as a result of numerous factors, including, among others, equipment failures, weather or adverse climate conditions, shortages or delays in obtaining qualified personnel, shortages or delays in the delivery of or access to equipment, necessary governmental, regulatory or other third party approvals and compliance with regulatory requirements.

CAUTION REGARDING FORWARD-LOOKING INFORMATION

This MD&A offers our assessment of the Company's future plans and operations as of November 29, 2013, and may contain forward-looking information. All statements other than statements of historical fact are forward-looking statements. Such information is generally identified by the use of words such as "anticipate", "continue", "estimate", "expect", "may", "plan", "will", "project", "should", "believe" and similar expressions. Statements relating to "reserves" or "resources" are also forward-looking statements, as they involve the implied assessment, based on certain estimates and assumptions, that the reserves described exist in the quantities predicted or estimated and that the resources and reserves described can be profitably produced in the future. All such statements involve known and unknown risks, uncertainties and assumptions.

Management believes that the expectations reflected in the forward-looking information are reasonable but no assurance can be given that these expectations will prove to be correct. Such forward-looking information included in this MD&A should not be unduly relied upon as the plans, assumptions, intentions or expectations upon which it is based may not occur. Actual results or events may vary from the forward-looking information.

In particular, this MD&A may contain forward-looking information pertaining to the following:

- the resource potential of the Company's assets,

- the Company's growth strategy and opportunities,
- performance characteristics of the Company's oil properties and estimated capital commitments and probability of success,
- crude oil production and recovery estimates and targets,
- the existence and size of the oil reserves and resources,
- the Company's drilling plans,
- capital expenditure programs and estimates, including the timing of activity,
- the Company's plans for, and results of, exploration and development activities,
- projections of market prices and costs,
- the supply and demand for oil,
- expectations regarding the ability to raise equity and debt capital on acceptable terms and to add continually to reserves through acquisitions and development, including the ability to negotiate and complete the agreements contemplated in this MD&A,
- the timing for receipt of regulatory approvals, including ANH approvals, and
- treatment of the Company under governmental regulatory regimes and tax laws.

The purpose of providing any financial outlook in this MD&A is to illustrate how the business of the Company might develop without the benefit of specific historical financial information. Readers are cautioned that this information may not be appropriate for other purposes.

The forward looking information herein is based on certain assumptions and analysis by the management of the Company in light of its experience and perception of historical trends, current conditions and expected future developments and other factors that it believes are appropriate and reasonable under the circumstances. The forward looking information herein is based on a number of assumptions, including but not limited to:

- the availability on acceptable terms of funds for capital expenditures,
- the availability in a cost-efficient manner of equipment and qualified personnel when required,
- continuing favourable relations with Latin American governmental agencies,
- continuing strong demand for oil,
- the stability of the regulatory framework governing royalties, taxes and environmental matters in Colombia and any other jurisdiction in which the Company may conduct its business in the future,
- the Company's future ability to market production of oil successfully to customers,
- the Company's future production levels and oil prices,
- the applicability of technologies for recovery and production of the Company's oil reserves,
- the existence and recoverability of any oil reserves,
- geological and engineering estimates in respect of the Company's resources and reserves,
- the geography of the areas in which the Company is exploring, and
- the impact of increasing competition on the Company.

The actual results, performance and achievements of the Company could differ materially from those anticipated in these forward-looking statements as a result of the risks and uncertainties set forth elsewhere in the MD&A and the following risks and uncertainties:

- global financial conditions,
- general economic, market and business conditions,

- volatility in market prices for oil and natural gas, the stock market, foreign exchange and interest rates,
- risks inherent in oil and gas operations, exploration, development and production,
- risks inherent in the Company's international operations, including security, political, sovereignty and legal risks in Colombia,
- the failure by counterparties to make payments or perform their operational or other obligations to the Company in compliance with the terms of contractual arrangements between the Company and such counterparties,
- risks related to the timing of completion of the Company's projects and plans,
- uncertainties associated with estimating oil and natural gas reserves and resources,
- competition for, among other things, capital, acquisitions of resources, undeveloped lands and skilled personnel,
- the Company's ability to hold existing leases through drilling or lease extensions or otherwise,
- incorrect assessments of the value of acquisitions or title to properties,
- the failure of the Company or the holder of certain licenses or leases to meet specific requirements of such licenses or leases,
- claims made in respect of the Company's properties or assets,
- geological, technical, drilling and processing problems, including the availability of equipment and access to properties,
- environmental risks and hazards,
- failure to estimate accurately abandonment and reclamation costs,
- the inaccuracy of third parties' reviews, reports and projections,
- rising costs of labour and equipment,
- the failure to engage or retain key personnel,
- changes in income tax laws or changes in tax laws and incentive programs relating to the oil and gas industry, and
- the other factors discussed under "Principal Business Risks" in this MD&A.

Readers are cautioned that the foregoing lists of assumptions, risks and uncertainties are not exhaustive. The forward-looking information contained in this MD&A is expressly qualified by this cautionary statement. The forward-looking information speaks only as of the date of this MD&A, and the Company does not undertake any obligation to publicly update or revise any forward-looking information except as required by applicable securities laws.

SELECTED QUARTERLY INFORMATION

The following table sets out selected unaudited quarterly financial information of Petrodorado and is derived from unaudited quarterly financial data prepared by management in accordance with IFRS.

	Q3 2013	Q2 2013	Q1 2013	Q4 2012
Total revenue	\$ 124,003	\$ 127,105	\$ 139,463	\$ 142,654
Net income (loss)	\$ (2,621,360)	2,173,323	1,076,506	(19,096,885)
Comprehensive income (loss)	\$ (234,691)	(1,663,468)	(1,290,542)	(20,459,040)
Net income (loss) per share (basic & diluted)	(0.01)	0.00	0.00	(0.04)

	Q3 2012	Q2 2012	Q1 2012	Q4 2011
Total revenue	\$ 140,006	\$ 217,194	\$ 208,370	\$ 631,657
Net income (loss)	1,040,883	486,532	(2,611,923)	(3,455,890)
Comprehensive income (loss)	5,177,759	(1,832,773)	(543,008)	(995,528)
Net income (loss) per share (basic & diluted)	0.00	0.00	(0.01)	(0.01)

Revenue recorded is primarily based on the timing of oil and gas sales. In Q4 2011, the Company generated oil and gas revenues of \$453,395 (net of royalties) as a result of the sale of 4,478 barrels of oil (total production on hand) at a settled price of \$112 per barrel. The decrease in quarterly revenue of \$563,854 from Q3 2011 to Q4 2011 was due to a decrease in production of 4,954 barrels of oil when comparing the two periods. Oil and gas sales were not realized in Q1 2012 given there was no oil and gas production in the quarter. In Q2 2012, the Company generated oil and gas revenues (net of royalties) of \$111,429 as a result of the sale of 1,020 barrels of oil at an average sales price of \$109 per barrel. Oil and gas sales were not realized in Q3 2012, Q4 2012, Q1 2013, or Q2 2013 given there was no oil and gas production in these quarters. Overall, the decrease in 2012 quarterly oil and gas revenue was due to the significant reduction of oil production from the Company's only producing well (ME-1), which was and remains shut-in as of Q3 2012.

Fluctuations in quarter-to-quarter net income (loss) are primarily on account of varying foreign exchange rates with resulting foreign exchange gains/losses recorded, as well as the timing of oil and gas sales throughout the fiscal year (see previous paragraph). In Q4 2011, the Company recorded a foreign exchange loss of \$1,258,213; this was due to the strengthening of the Canadian dollar and Colombian peso compared to the US dollar in the quarter. In Q1 2012, the continued weakening of the US dollar resulted in further foreign exchange loss of \$1,493,155. In contrast, the US dollar strengthened significantly in Q2 2012, resulting in a foreign exchange gain of \$1,503,052 for the quarter. In Q3 2012, a return to a weakening US dollar resulted in a foreign exchange loss of \$3,019,471, only being offset by the recorded gain of \$4,752,650 due to the divestiture of Peru assets. Q4 2012 experienced a foreign exchange gain of \$1,296,737 as the US dollar strengthened marginally against the Canadian dollar and had no significant change in strength when compared to the Colombian peso. Furthermore, impairment losses of \$19,019,892 (\$18,735,892 of exploration and evaluation assets and \$284,000 of property, plant and equipment) were also recognized in Q4 2012, contributing to the overall loss in the quarter. In Q1 2013, a foreign exchange gain of \$1,704,565 was realized as an improvement in the strength of the US

dollar was experienced against the Canadian dollar and Colombian peso. Continued increase in the strength of the US dollar resulted in a further \$3,095,634 foreign exchange gain in Q2 2013. However, a \$1,852,758 foreign exchange loss in Q3 2013 occurred as a decrease in the strength of the US dollar against the Canadian dollar and Colombian peso was realized.

OUTLOOK

The Company is currently working on 2014 capital program and budget, which is expected to be released in the near future. This budget is contingent on the outcome of current events such as the drilling of the Verdal-2X well and the analysis of the CPO-5 Block, including the remediation of the primary cement job at the Loto-1X well. Meanwhile, the capital program for the remainder of 2013 has been set at \$5.3 million, fully funded from current working capital within the Company. This budget includes the following:

- Drilling of the Verdal-2X well in the Talora Block
- Further evaluation of the CPO-5 Block regarding future endeavors
- Completion of the Phase I work program on the California property
- Management evaluation of all exploration blocks outlining future Company strategy in order to maximize shareholder value
- Continuing with the environmental stewardship and social initiatives in the Company's area of operations.
